

Sprint 1 Report

Author : Alfredo Vicuna.

Product Name: Calendar Application.

Team Name: CAP.

Date: October 20th, 2019.

Actions to stop doing: CAP was able to successfully set up it's development environment on all hosts computers. Each developer was tasked to familiarize themselves with the API's and environments on their personal computers. Furthermore, Matthew was able to successfully setup and implement CircleCI and GIT, allowing us to utilize and leverage the benefits of version control and continuous integration throughout the span of this project. As we had just recently hit our goals for the sprint, we feel that we need to keep our stand ups strictly to just stand ups, and address any other issues in some other meeting.

Actions to start doing:

CAP feels that we should start having each other more accountable for pull requests. Share the responsibilities amongst all teammates for code review, etc.

Actions to keep doing:

Keep on working well together.

Work Completed / Not Completed :

All work for the initial sprint was completed.

Work Completion Rate :

100%
